ENGINEERING INDUSTRIES

Spread Factory is one of the factories which works in the field of manufacturing Air- Conditioning Outlets and air conditioned duct accessories and parts.

Our products have been installed in many distinguished governmental and private projects in Egypt.

Our products have won many approval from various sectors, such as, health, education and others.

Our Research and Development at our factory have made us more flexible, versatile and capable to fulfill needs of the market.

To be one of the world's leading manufacturers of internationally recognized high quality air outlets in share and providing innovation and comprehensive air Outlet solution, which will become the most preferred choice by customers by 2020.

VISION

Spread will always function and perform in accordance to international standards.

Customer satisfaction is our number one priority and we promise to continue providing them with unique and individual solutions to enhance the reputation of Egyptian industry.

MISSION

Spread is committed to support its vision by the following values:

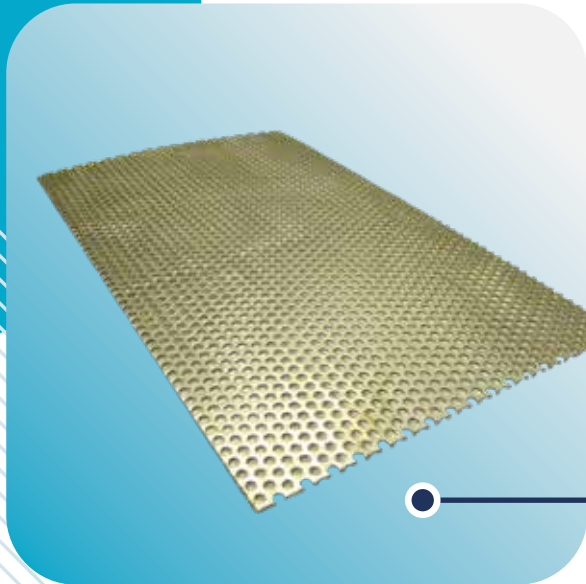

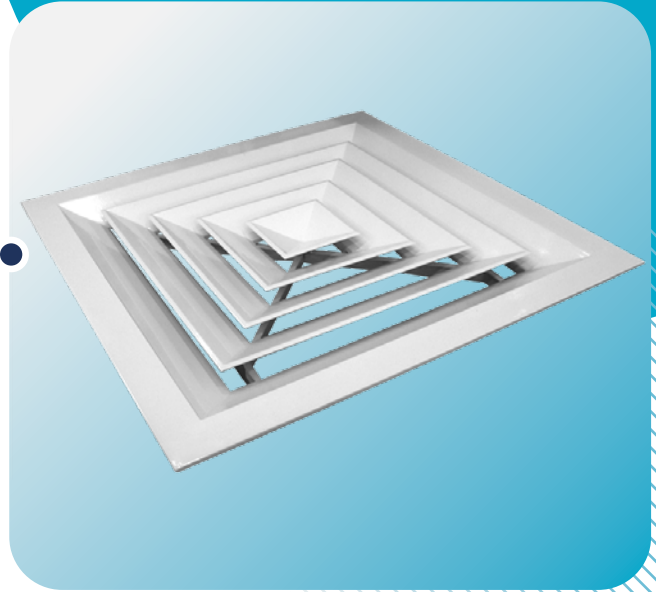

- Innovation and Excellence
- First class excellence by adopting TQM
- Investment in human capital
- Teamwork
- Recognizing the value of our employees
- Working closely with our customers

VALUES

CEILING DIFFUSER (CD)

Can be supply or return, square or rectangular shape with one, two, three or four ways patterns.

Diffuser core is fully removable

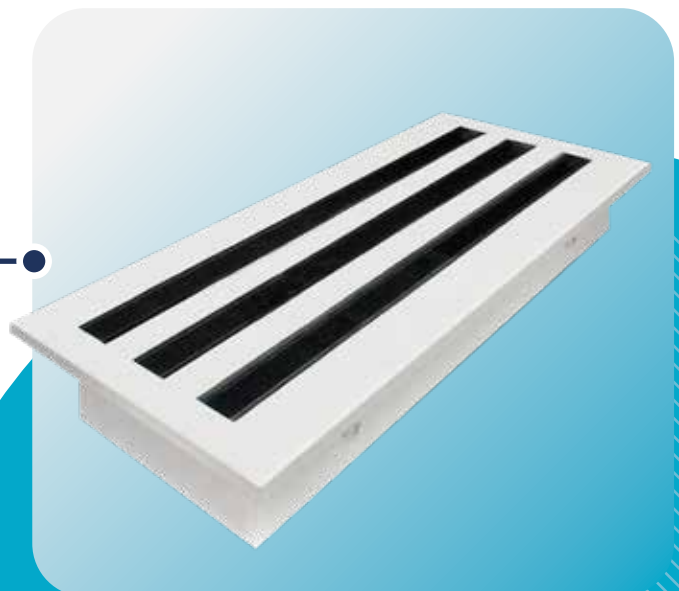

PERFORATED CEILING DIFFUSER (PCD)

Fully adjustable air pattern and with Opposed Blade Damper.

LINEAR SLOT DIFFUSER (LSD)

Can be supply or return, square or rectangular shape with one, two, three or four ways patterns.

Diffuser core is fully removable

PLENUM BOX

Is designed to ensure equal distribution of air through the linear slot diffusers. There is acoustic lining in the supply plenum box to reduce noise and turbulence generated in the duct before reaching to the grill.

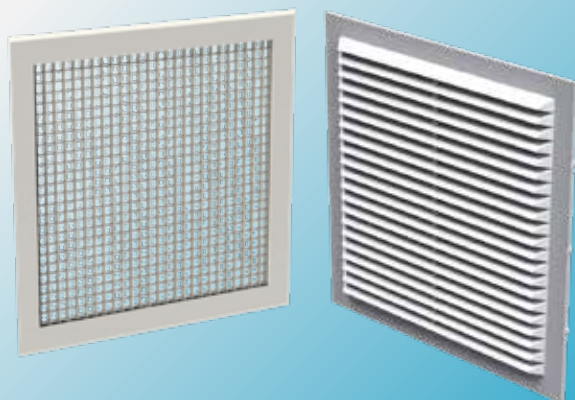

LINEAR BAR GRILL (LBG)

LBG Comes in many models, Supply, bar and blade, bar and register, core only, frame without flange and floor grill.

AIR GRILL & REGISTER

Air Grills & Registers come in many models: Supply air grill, supply air register, return air grill and return air register with horizontal, vertical blades or combined.

CEILING ROUND DIFFUSER (CRD)

Can be used as supply or exhaust in cooling, heating or ventilation application with fully adjustable cores to provide horizontal and vertical air pattern, removable inner core permit easy installation.

FRESH AIR LOUVER (FAL)

Used for exhaust and fresh air is composed of horizontal and fixed blades and inclined down 45° and spaced which allows air to pass through it while keeping out unwanted elements such as water, dirt etc.

SAND TRAP LOUVER (STL)

Sand Trap Louver are very effective in trapping sand while having attractive look, it is constructed from two sets of inverted C-Channels mounted and vertically and self emptying holes at the bottom.

VOLUME CONTROL DAMPER

Is made of single or multi blades, hand looking quadrant is provided for manual operation, extended shaft and motor base is provided for motorized operation, it can be rectangular or circular, opposed blades action on request.

DISK VALVE (DV)

Is manufactured from high quality steel and polyester powder coated, center core is adjustable by screw and nut for air control, the outer frame is fitted with a foam rubber gasket.

FIRE DAMPER CURTAIN TYPE (FD)

This model is approved for use in wall, floor and partitions resistance rating of 3 hours or more. It is designed to stop the spread of fire throughout ventilation system, it is fitted with fusible link 72°C (165°F)

JET DIFFUSER

Jet Diffuser is designed in areas where a long throw is needed. Inner rings can be controlled in both horizontal and vertical directions. One, two, three, vertical directions. One, two, three, four jet diffuser elements per panel can be selected.
